

Undergraduate Program Review

Range and Wildlife Management

Strengths

- Healthy enrollment and apparent demand
- Faculty research productivity
- Department's goals and objectives aligned well with University's mission
- Assessment of Student Learner Outcomes:
 - A unique feature is the external evaluation through internship field supervisor's assessment
 - Course assessment: pre- and post- tests
 - Student perception of their learning
- Eighty five internships and 104 students participating in research projects resulting in 117 presentations in conferences and publication of 37 manuscripts
- National evaluation by The Wildlife Society

Weaknesses

- Limited teaching FTE (IF there is a need to offer new, different classes; no data was presented which indicated this is the case; if there is no need, then teaching FTE seems adequate.)
- Some data regarding student competencies are not clear (numbers in graduate school, rankings from internship)
- Insufficient budget for more equipment, support field trips, and support laboratories (All programs could benefit from having more budgetary resources.)

Recommendation

Unconditional continuation.
